## Guarantee & Merchant Return Policy

You, the customer, must be satisfied. We guarantee that everything you purchase from us is free from defects in material or workmanship. If you are not completely satisfied with any product purchased from us, return it within 30 days, and we will replace it, exchange it, or refund the purchase price, whichever you prefer. This warranty covers any item normally catalogued or stocked by Thunderbird but does not cover special order items, or incidental or consequential expenses. No other warranty is implied. Thunderbird will replace or credit only the specific piece of merchandise that is defective or damaged and will not be held responsible for other material costs associated with the loss.

## About Thunderbird

Thunderbird Supply Company originated over thirty-nine years ago as a humble display case in a motel lobby in Gallup, New Mexico. Native American silversmiths and craftsmen came to buy finished stone for the jewelry they created and are renowned for to this day. Word began to spread of the good customer service and competitive prices, and soon Thunderbird found itself with a larger and larger list of customers who were interested in more than just finished stonework. Today, Thunderbird is a corporation serving a worldwide market with an inventory of over 13,000 jewelry supply items, from lapidary tools to display cases. It employs over 100 people in three locations and is family-owned.

Headquartered in the heart of Indian country, Thunderbird Supply Company still serves a large and loyal Native American customer base. Our products reflect our roots and leanings toward Native American art from the Four Corners area.

Silver Metal Based Upon a \$20.00 Market

Gold Metal Based Upon a \$1,200.00 Market

This symbol designates items that are combinable for better price breaks. For example, you may buy one each of 10 different kinds of natural stone strands and receive the 10 quantity price break on each strand. A great deal!

In order to give you the best printed sample of our items possible, our metals, findings, stone and bead/strand items are shown at actual size unless otherwise noted.

Shipping, Ordering, and Pricing Information can be found on the inside back cover.

Look for our new items throughout the catalog. We are continually striving to bring you new and varied selections.

Helpful tips pertaining to each category can be found at the beginning of each section. The bold numbers at right will direct you there.

Buying in large quantities? Call for wholesale pricing.

All Prices Subject To Change Without Notice.  
We are not responsible for typographical errors.

## Fineness of Gold

Karat is a measure of the fineness of gold. 24 karat is fine gold. One karat equals  $\frac{1}{24}$  (.0417). Thus 14 karat gold is  $\frac{14}{24}$  fine gold and the balance ( $\frac{10}{24}$ ) is alloy. The usual alloy metals are silver, copper, and zinc. Nickel is used in white gold.

Karat	Fineness
10	.41667
12	.50000
14	.58334
24	1.00000

## Why Metals Prices Change

Metal pricing is directly related to the daily metals market price, or the “spot” price and also an “add-on” price for the fabrication cost. Periodically we are obligated to update our “add-on” prices due to market conditions.

Please ask your salesperson for your own current metals price list. If you would like a daily market quote, please call us at 1-800-545-7968, or you can stay updated by looking on our website at [www.thunderbirdsupply.com](http://www.thunderbirdsupply.com). The opposite page has an approximated price list for gold-fill, based on a \$1,200.00 market, and page 4 has one for silver based on a \$20.00 market. The price quoted by your customer service representative and the actual price invoiced may vary slightly due to small weight variations.

Unless noted differently, our silver and base metal products are stocked in sheets sized 6”x 36”. Gold-filled sheets are stocked in 3” coils. We will cut your sheet order to any size  $\frac{1}{4}$ ” or more by full sheet dimensions. There is generally no extra charge for custom cuts (within reason—**cutting fee** depends upon complexity of request). We will coil wire orders to your specifications, but may add a **coil-ing fee** of \$0.50 per coil if you request two or more coils of any one product.

Triangle and low dome wire is referred to by size, not gauge. The B&S gauge can only be used with nonferrous round, half round, square, and sheet metal.

## How Gold-filled Is Made

Gold-filled is made by fusing a layer of karat gold to a suitable supporting metal (or alloy), using equipment that carefully controls heat, pressure, and time. The bond produced is a permanent one.

Next comes a series of rolling operations, which compress the strip into a sheet. Repeated rolling reduces the thickness of the material in such a way as to preserve the proportionate thickness of the gold and the supporting metal. Repeated rolling also serves to increase the density of the gold, so that it becomes harder and more durable. This process is also used in fabricating silver-filled items.

## Fineness of Silver

Fine Silver	.999 = 100% Pure Silver
Sterling Silver	.925 = 92.5% Silver / 7.5% Copper
Coin Silver	.900 = 90% Silver / 10% Copper
Nickel Silver	0% Silver/65% Copper/17% Zinc/18% Nickel

## Hardening Sterling Silver By Heat Treatment

To harden Sterling Silver, simply heat it to 600°F (316°C) for 30-50 minutes in a kiln or furnace. Air cool the Sterling Silver before pickling it. The hardness will then be equal to the hardness achieved by cold-working it to a 50% reduction (or ¾-hard).

## Annealing Sterling Silver

We recommend annealing Sterling Silver at 1200°F (649°C) to give it the best ductility and grain structure. Before annealing silver, coat the piece with boric acid and alcohol. This flux coating will reduce oxidation and minimize cleanup. Silver should be annealed in an oven at 1200°F for 15 minutes for 18ga (.040"), 20 minutes for 8ga. If silver annealing must be done by a torch, a good visual aid is:

- Visible Red—900°F
- Dull Red—1200°F
- Cherry Red—1400°F
- Bright Salmon Red—1600°F

Quench the Sterling Silver as soon as the redness has gone out of the metal. Otherwise, the slow cooling will age-harden the metal.

## Specific Gravity

The specific gravity of a metal or alloy is merely the weight in grams of one cubic centimeter. When it is more convenient to work in troy weights, the number of troy ounces per cubic inch of any metal or alloy may be found by multiplying its specific gravity by the constant 0.52686. For example, the specific gravity of 14K yellow gold is 13.07. Therefore, 13.07 x 0.52686 = 6.88606. The weight of 14K yellow gold in troy ounces per cubic inch is 6.88606.

Half Hard silver is stiffer than Dead Soft silver because of the tempering process it goes through.

## Casting Grain/scrap

Our sterling casting grain is a composition of 92.5% fine silver and 7.5% pure copper. Oxygen free, sterling grain is ideal for virtually every casting method that requires a high quality raw material for best results. The material is provided as free form shot. De-oxidized grain melts exceptionally cleanly and exhibits excellent flow characteristics during casting. The de-oxidizers significantly reduce fire scale, and improve the tarnish behavior of the finished product. Sold by the troy ounce.

Sterling Silver scrap is an economical alternative to grain for casting.

Stock#	Description
B. 110151	Sterling Silver casting grain
C. 110157	Sterling Silver de-oxidized casting grain
D. 110152	Sterling Silver clean scrap

### Twisted Round Wire: Silver with a Twist

Sterling Silver, Dead Soft. See note below.

Twisted round wire is made by twisting two wires of the same gauge together. The gauge listed is the gauge of the wire used for the twist, not the gauge of the finished product. However, the dimensions given are for the finished, twisted wire.

### Introducing Earth Silver

Knowing where the silver in projects comes from is important to us, your customers, and the environment. Thunderbird has always been mindful of our customer needs, and it shows in our products. The forged sterling silver metals we sell come from pre-produced sources that have been refined down to their purest forms and forged into new clean metal.

The mining of most new precious metals, including silver, negatively impacts the environment and cultures surrounding mines. Thunderbird Supply uses 100% pre-produced sources so that we can help to minimize our effect on the environment and promote a healthier world.

# Display

*Enchanted is Thunderbird's complete line of cases and displays. A large selection of displays are made right here in the USA by us. Who better to design and build jewelry display cases than the jewelry supply experts at Thunderbird. Look for items throughout this catalog with our logo. Please call us and ask about custom designs and specialty items.*

## Tips for Care and Cleaning of Jewelry

When dressing and getting ready to go out, put your jewelry on last to avoid getting cosmetics or hairspray on it. Remove rings and bracelets before doing housework, home repairs, or gardening. Protect your jewelry from sharp blows, harsh chemicals, sunlight, and extreme temperatures.

After wearing, gently wipe each piece of jewelry with a soft 100% cotton cloth to remove make-up, hairspray, salts, and skin oils. This is especially important for pearls. Always use 100% cotton, since paper, polyester, and coarse fabrics often contain wood fibers or synthetics which may impart fine scratches.

Sterling silver tarnishes naturally and requires occasional cleaning/polishing. Silver will tarnish more rapidly in a humid climate than in a dry climate. Clean and polish sterling silver with a good quality commercial polish and a soft, 100% cotton cloth or gloves (p.20). Be careful when using polish on pieces set with soft stones such as turquoise, lapis lazuli, and coral. Try to avoid getting the polish on the stones as it may cause discoloration, particularly when the stone is untreated.

To clean tarnished liquid silver, sprinkle a fair amount of dry baking powder on a soft cloth and hold it in the palm of your hand. Firmly rub the strands of liquid silver while gently pulling them through the cloth. Do not pull too hard or you will break the strand.

After cleaning the strands, shake them to get rid of excess powder. Brush with a soft brush if needed. Do not dip liquid silver in silver dip. The dip, no matter how well you rinse it off, will leave salt deposits between each bead. This will make the necklace strands stiff.

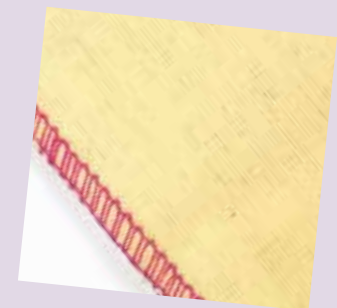

Store your jewelry separately, rather than heaping it together in a drawer where one piece may scratch another. To help retard tarnish on sterling silver, wrap it in a soft cotton cloth or special anti-tarnish tissue (p.20) and place it in an air-tight plastic resealable bag (p.33). Never store pearls in a plastic bag; a chamois or velvet pouch or box is best (p.22).

Avoid using fabrics or paper products with wood fibers or synthetics as they can scratch jewelry. 100% cotton cloth is best.

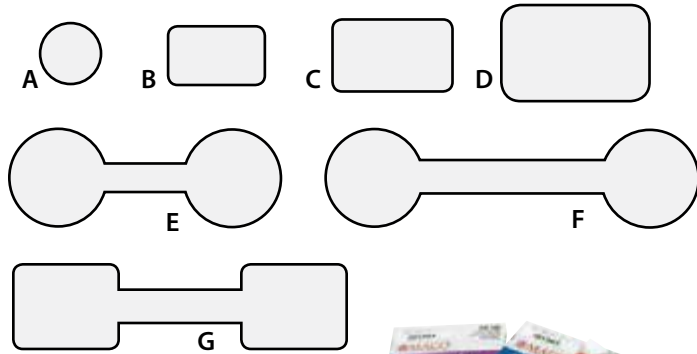

Baking powder and a soft cloth are best on tarnished liquid silver. Be careful to not break your strand.

## Resealable Plastic Bags

The mini grip "redline" resealable polyethylene bags (p.33) we sell are FDA approved for food storage. In addition to the standard 2 mil (.002" thick) size listed, the thicker 4 mil bags can be special ordered; please ask your customer service representative for details.

### Self Adhesive Multi-Purpose Labels

These labels are great for pricing, identifying and organizing merchandise.

# How To Get Started on Silversmithing What Do I Really Need?

An important question to ask. Many people call us and are excited to start doing their own silversmithing metal work. They want to make sure they have the necessary tools and supplies in their arsenal to get the job done. Our experts here at Thunderbird recommend the following items to do just that. These are good quality items you will need to do the job properly without breaking the bank on the more expert, top-of-the-line items.

## Suggested Silversmithing Kit

For around \$200.00 all this can be yours and you will have the tools and supplies you need to create your next metal project.

# Tools & Supplies

## Using a Crimping Tool p.71

Crimping takes two steps.

Thread a crimp bead on one end of a length of flexible beading wire **figure 1**. Then thread one end of the clasp. Bring the wire back through the crimp, leaving a 3" (7.6cm) tail. Slide the crimp close to the clasp leaving a small space. Mash the crimp hard in the hole closest to the handle, which looks like a quarter moon. Hold the wires apart so one piece is on each side of the deep dent.

Put the dented crimp in the front hole of the pliers, standing it on end, and squeeze as hard as you can. This folds the crimp into a small cylinder **figure 2**.

figure 1

figure 2

## Fire Scale

When copper bearing alloys (pink, yellow, green golds and sterling silver etc.) are heated in the presence of oxygen, oxides are quickly formed. Cupric Oxide (CuO) is a black layer on the surface of the metal that can usually be dissolved in pickle. White gold produces a nickel oxide that is harder to get off if not protected from oxidation.

### Preventing Fire Scale

Flux or fire coats work by forming a coating that protects metal from oxidation. Commercial fluxes and borax powder or sodium borate (p.82) are the most commonly used fire coats. Borax melts at 1367°F (742°C). Brush on the flux generously before soldering.

### Removing Fire Scale by Pickling

A pickle is usually a sodium bisulfate based solution (p.81) that is used to remove surface oxidation caused by heating the metal. A crockpot is commonly used as a pickle pot to hold and heat the solution. The pickle solution works best at about 180°F (82°C). Remember, when mixing always add the acid to the water, not the water to the acid. Because ferrous metals will cause a catalytic reaction that will then copper-plate anything put into the pickle, remove all steel pins and binding wire before placing pieces in the pickle, and use copper tongs (p. 75) to insert and remove pieces. Experiment with the time needed in the pickle, depending upon the strength of the pickle and the amount of fire scale.

### Removing Fire Scale by Polish

Fire scale can also be removed with a fairly coarse compound polish such as tripoli or bobbing (p.83-84).

Apply the compound to a muslin wheel (p.53). Avoid over-charging the wheel. Too much compound will glaze the wheel and cause black streaks or scratches on the item being cleaned. Let the wheel and the compound do the work. Avoid heavy

pushing into the wheel. This will only slow the wheel and cause the motor to overheat.

## Plier Types p.69-70

### Chain Nose Pliers

have smooth, flat inner jaws, and the tips taper to a point so you can get into tiny spaces. Use them for gripping and for opening and closing loops and rings. Some people call chain nose pliers flatnose because the inside of the jaw is flat.

### Flat Nose Pliers

have a greater surface area in the jaws which gives them a better grip. Great for grasping and holding various objects, mashing crimp beads, working with chain, and opening & closing jump rings.

### Round Nose Pliers

have smooth, tapered, conical jaws. You form loops around them. The closer to the tip, the smaller the loop.

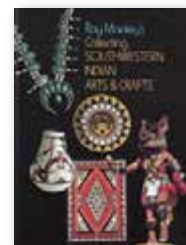

# Books

for Informative Reading

**NAVAJOLAND**  
By LeRoy DeJolie. LeRoy DeJolie takes you on a visual tour of Navajoland, his homeland, an expanse that he sees not only as a ruggedly beautiful territory in the Four Corners region but also as the cradle of his heritage. 80 pages. #704008 \$12.83ea

## Stick It To Them!

### Hot Stuff® Instant Glues

The original clear, penetrating instant glue. Bonds in 3-5 seconds. 2oz

Stock#	1-4ea	5+ea
703060 Instant Glue	\$ 11.55	\$ 10.54

Instant, clear, and gap-filling glue that bonds in 10-25 seconds. 2oz

Stock#	1-5ea	6+ea
703061 Super "T"	\$ 11.15	\$ 9.81

Instant, clear, ultra gap-filling glue that bonds in 20-50 seconds. 2oz

Stock#	1-5ea	6+ea
703062 Special "T"	\$ 12.30	\$ 10.80

Extra Hot Stuff no-clog applicator tips for glue bottles 2pc package #703066 \$ 2.50

### NCF® Accelerators

Quick accelerator for all instant glues. Dries instantly. Aerosol 6oz spray. Non-CFC

Stock#	1-5ea	6+ea
703064 Quick 6oz	\$ 13.40	\$ 11.76

### Super Solvent®

For Instant Glues. 2oz

Stock#	1-5ea	6+ea
703065	\$ 6.75	\$ 5.89

### NCF® Mild Pump Accelerator

For all cyanoacrylate glues. Speeds up bonding with a good gap-filling capability and a strong fillet. Can be used before or after adhesive is applied. One spritz from a spray pump bottle does it.

Stock#	1-3ea	4+ea
703005 2oz	\$ 7.80	\$ 7.44

Stock#	1-2ea	3+ea
703006 4.9oz	\$ 10.60	\$ 9.53

Stock#	1-2ea	3+ea
703014 Refill 18oz	\$ 42.40	\$ 39.22

### Krazy Glue®

All-purpose gel. Glues up, down, and sideways. Fills gaps on less than perfectly-mated surfaces. Forms a strong, long-lasting bond. Best on these surfaces: Ceramic, Pottery, Wood, Leather, Rubber, Metal, Plastic (PVC, ABS, FRP), Vinyl.

Stock#	1-4ea	5+ea
703013 2 gm	\$ 1.90	\$ 1.75

### Fast Setting Vigor® Super Glue

Very fast 10-20 second setting time.

Stock#	1-4ea	5+ea
703001 20gm	\$ 8.60	\$ 8.24

**\*\*Most Chemicals are restricted to UPS Ground shipping.**

### Clear Epoxy 330®

This versatile, quick drying adhesive is excellent for assembly of stones to metal findings and a variety of other jewelry applications. Takes a high polish for inlay. Clear in color. Thickens in 15 minutes. 2 part adhesive. Most epoxies are good for joining metal, leather, rubber plastic, etc. 2 tubes. 1 oz

Stock#	1-5ea	6-11ea	12+ea
703007	\$ 3.45	\$ 3.16	\$ 2.94

### Amber Epoxy 220®

Permanent bonding for all types of assembly. Slow setting time for production bonding of gem materials to metal findings. Ultimate tensile strength and resists thermal shock. Somewhat heat resistant. 2 part adhesive. Takes a high polish for inlay. Amber in color. Thickens in 1 hour, sets in 8 hours. 2 tubes. 1oz

Stock#	1-5ea	6-11ea	12+ea
703008	\$ 3.45	\$ 3.16	\$ 2.94

### Vigor® Super Glue

A cyanoacrylate adhesive with high, rapid bonding. Clear in color, thin-bodied, bonds both porous and non-porous surfaces, including paper, wood, porcelain, metal, plastic and fabric. Sets in 45-60 seconds.

Stock#	1-11ea	12-23ea	24+ea
703004 2gm	\$ 1.30	\$ 1.20	\$ 1.10
703003 20gm	5.10	4.63	4.23
703016 20gm	5.25	4.00	3.95

### 5 Minute Epoxy

S-205 Epoxy adhesives cure and join things together by chemical reaction between resin and hardener. This reaction results in high strength bonds resistant to most chemicals. 2 part adhesive. Super fast setting, non-shrinking compound. Dries clear, sets in 5 minutes. 2 tubes.

Stock#	1-5ea	6-11ea	12+ea
703009 1oz	\$ 3.20	\$ 3.05	\$ 2.94

Stock#	1-5ea	6+ea
703017 9oz	\$ 11.65	\$ 11.24

### Opticon 224 Fracture Sealer

Is a material and a method for sealing fractures in flat or curved, polished or unpolished surfaces. The process enables the elimination of fracture reflection and structural weakness and in addition accomplishes the filling of pits. Heating required in oven at 150° for one hour. Not recommended for heat sensitive stones. 9oz

Stock#	1-5ea	6+ea
703041	\$ 17.90	\$ 16.75

**S-50 Metal Patch & Fill®**

Ready to use rustproof aluminum filling and patching; useful for channel inlay work. Dries light grey in 15 minutes. 4 oz tube

<b>Stock#</b>	<b>1-5ea</b>	<b>6-11ea</b>	<b>12+ea</b>
703002	\$ 2.90	\$ 2.78	\$ 2.68

**Acetone**

A quick drying solvent that dissolves most lacquers and cements. Used to soften plastic aluminum when repairing channel inlay jewelry.

<b>Stock#</b>		<b>1-5ea</b>	<b>6+ea</b>
703044	16 oz	\$ 11.60	\$ 10.65

**Cocker Weber Brush with Wood Center**

This brush is the highest in quality produced by one of the most respected polish brush manufacturers. The pure chunking bristles will remain tightly packed into the hard maple wood hub. Attach to spindle on a motor and use these brushes for a first buff. Apply a buffing compound (720001) to polish away firescale and scratches. 3/4" bristles, 3 rows of bristles.

Stock#	Description	1-4ea	5+ea
R. 705005	3 1/2" x 3 Row	\$ 3.10	\$ 2.66

Use with spindles on p. 56

### Metal Center Brush

These stiff bristle brushes have an aluminum hub and a plastic insert, also for use on a tapered spindle. Made in Germany.

B. 716118	8"	5.50	5.30

## Sawblades and Spindles

### Spindles

These attachments are designed to permit the use of "lead" or other soft-center wheels (cloth buffs, wire brushes, etc.) on electric motors. No need for washers or nuts! Wheel is held securely in place by centrifugal force. Spiral thread allows wheel to spin up the tapered shaft when motor is turned on; when motor is turned off, wheel comes slowly off for safe, quick change. Spindle is held securely on shaft with two socket set screws. Precision-machined from cold rolled steel bars. Rustproof plated finish.

### Templates

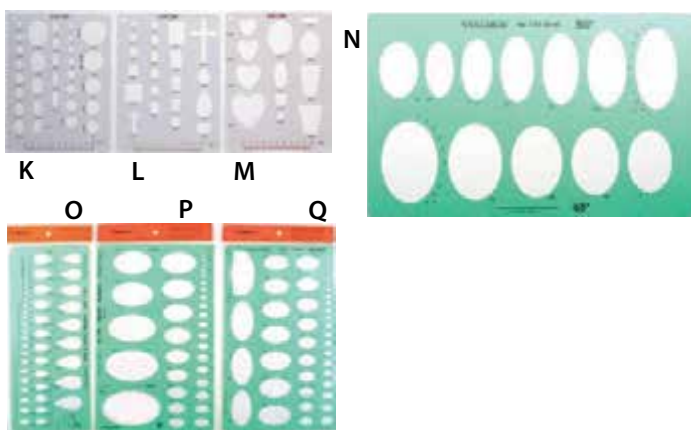

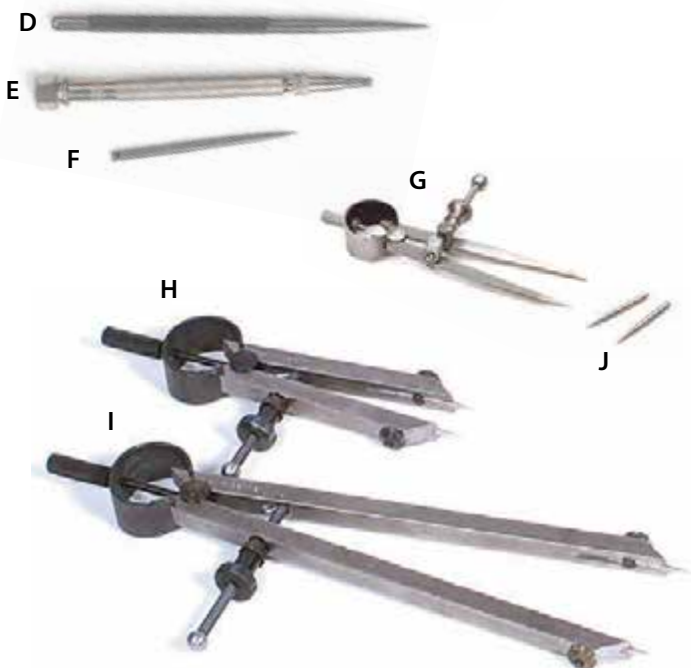

Choose the right template for your project from the variety below. Each offers different shapes and sizes. Circular shapes have pinholes around the perimeters to allow for accurate centering. You can easily divide the ellipse into various parts with the customary projection steps. Save money by cutting your own shapes out of sheet metal instead of having to purchase them pre-cut. All templates have at least 12 cut pit, number varies in type.

# How To Order Special Initial Stamps

1. Please print name clearly and indicate capital, small letters, periods, or any other punctuation.
2. Determine if you want straight or bent tool shank.
3. Choose Letter Style
4. Choose Letter Size
5. Check chart for maximum number of letters per size, to see if the stamp you are ordering will fit. If not, call for price quote.
6. All custom stamps artwork (name, initials, or design) must be sent in before the stamp order will be processed. To help eliminate any misunderstandings, all orders must be submitted in writing by mail or fax. No orders accepted by phone.

**Soldering Supplies**

**Solder**

For the quality of your products we do not sell acid core solder which could corrode metals. While all the products are great, we've seen a few customer favorites stand out. For a quick job like sealing jump rings or repair works, use easy Solder It (723043). For pieces with stones in them use Kool Jool (723022)

V. 720055	Green ¼ lb	5.40	4.61	3.84

# Stringing Supplies

The following is a description for list of different stringing options. These items can be found on p.85-95. Always use the strongest cord possible for the job.

## Elastic Cord

also known as *Stretch Magic* and *Elasticity*, is great for beading. The stretch eliminates the need for a clasp. Available in clear and black. It ranges in diameter from .50mm, .80mm, and 1.0mm, and comes on 10M, 25M, or 100M spools.

## Imitation Sinew

is a continuous-filament, waxed polyester cord that comes in brown and natural colors. It is very durable and works well for heavy glass and ceramic beads. It can also be split to make thinner cord. Available in 90yd or 125yd spools.

## Leather Cord

is black in color and good for large beads and pendants. It comes in three thicknesses: 1.0mm, 1.5mm, & 2.0mm and comes on 25yd or 100yd spools, or by the single yard.

## Foxtail

is a fine, strong nickel chain used for stringing metal and glass beads, particularly those with rough or sharp threading holes which might cut through the thread. Foxtail is available in .80, .90, 1.22, or 1.50mm and is sold by the foot.

## Nylon Thread

is somewhat less expensive than silk and is available in the same thicknesses as silk. It is sold on cards with 2 meters of thread attached to a needle in black or white.

## Nymo

is a waxed nylon thread most commonly available in white. It is available in A, B, D, and F sizes. B and D are the most popular thicknesses for beadwork. Nymo can be used for any beadwork that needs a fine yet tough thread.

## Polyester Cord

will not shrink from moisture and is less likely to fray than silk. It is available in a .015" weight and 4200yd spools.

## Silk Thread

is a versatile cord which is easily knotted. This is the best choice for stringing delicate beads such as freshwater pearls. Silk will stretch so pre-stretching is advised. Silk thread is sold on a card with a needle in either black or white. It comes in #1-#8, #1 being the thinnest.

## Bead Stringing Wire

is made from 7, 19, or 49 strands of nylon coated stainless steel wire braided together to be very flexible and strong. The more strands, the more flexible and less prone to kinking the wire will be. The 19 and 49 strand wires combine the soft, silky feel of thread with the strength and abrasion resistance of stainless steel. The 7 strand wire, often called "tiger tail", is good for heavy beads and beads with sharp edges which might cut into thread. Crimp beads are recommended for finishing the ends of bead stringing wire, but you can knot the 19 and 49 strand wire. Available in multiple diameters and colors, bead stringing wire is sold on 30ft, 100ft, or 1000ft spools.

## Waxed Thread

is strong and durable polyester, and the wax coating makes it fray-resistant. Available in beige and mahogany brown and sold on 2oz spools of 116yds. Waxed thread is ideal for stringing heavy beads and large jewelry components.

## What Beadalon® Wire Should I Use? p. 93-95

Generally, use the largest diameter wire that will comfortably pass through your smallest bead hole. If you can pass a wire through a hole twice, you probably need to use a bigger wire. Allow spacing between your beads to reduce abrasion, and account for the weight of your beads when deciding wire diameter. Heavier beads need thicker wire. Beadalon® comes in 49, 19, and 7 strand wires and each wire comes in various widths. The more strands in a wire, the more flexible and kink resistant it is.

Diameter	Recommended Wire Uses
.010"	Good for bead weaving, Peyote Stitch, and small seed beads
.012"/.013"	Good for Austrian crystals, seed beads, and freshwater pearls
.015"/.018"	Most versatile sizes. Use with medium to heavy glass, metal, ceramic, and stone beads.
.020"/.021"	Use with metal, large, or heavy beads with medium to large drill holes such as garnet, crystal, and glass.
.024"/.026"	Good for metal, large, or heavy beads with large drill holes such as African trade beads.

More info on p. 203

## What's Thread Heaven?

Thread Heaven is a thread conditioner and protectant which prevents tangling and fraying. It reduces hand fatigue by adding a thin, even slick coating to the thread to reduce drag. To use it, press your thread into the product and then drag the thread across it. Pull your thread through your fingers to remove excess. Thread

Heaven may be used instead of beeswax products for more controlled consistency. It's useful in beading as well as quilting, applique, embroidery, cross stitch, hand and machine sewing. It can be used with any kind of fabric or thread, including metallic threads.

Thread Heaven can be found on p. 87.

# Thread Your Way

Nymo brand thread is popular for stringing seed beads or heishi because of its strength and flexibility. The Nymo threads range in sizes from A-FF, with "A" being the smallest, and "FF" the largest. Wax polyester and imitation sinew can be used in stringing heavy necklaces but are mainly used to tie around stone fetishes. Nylon thread is the thread of choice for seed beadwork & bead-weaving. Slightly waxed and lightly twisted.

# Needles for Any Use

We carry sharpened eye, split, and twist beading needles. Our sharpened eye needles are available in four sizes, from 10 (largest) to 15 (smallest). Our split or Big Eye needles are pointed at both ends with a wide center opening for easy threading. Twist needles are stainless with a large looped end. Loop is squeezed to a smaller size for beading.

Stock#	Description/Size	PcPkg	1-9pkg	10-49pkg	50+pkg
A. 574061	12 Small	4	\$ 1.35	\$0.88	\$ 0.81

**Beadalon® Bead Stringing Wire**

Complement gemstone and glass bead colors with Beadalon 7 'Clear Colors'. This wire is nylon coated in translucent shades of Blue, Green, Pink, Purple, and Red. The nylon coating on 'Clear Colors' allows light to pass through and reflect off the bright stainless steel wire for a spark of color that makes beaded designs come alive. 7 Strand, 30 Feet.

## Jingle Cones

Jingle cones are used to embellish dresses worn during jingle dances at Native American powwows. Jingle cones, like any other musical instrument, come in different sizes, quality, tone, and pitch. Traditionally, jingle cones were made of Copenhagen snuff cans. Now you can find them in Thunderbird in a variety of colors and sizes.

## Beadalon

### Wire Guardians

### Scrimp Finding Instructions p. 156

Begin by loosening screw to allow wire to go through the Scrimp Finding.

Feed the wire through the Scrimp Finding, onto a Wire Guardian [optional], attach a clasp, and finally back through the Scrimp Finding.

Tighten screw for a secure and clean finish. TIP: For an extra strong Scrimp Finding, add a small amount of glue to the screw.

## Findings Abbreviations

14kt	14kt Gold	Solid 58.3% Pure Gold.
A/C	Antique Copper Plated	Pewter, Which contains NO lead, Copper Plated and finished to look antique.
A/G	Antique Gold Plated	Pewter, Which contains NO lead, Gold Plated and finished to look antique.
A/S	Antique Silver Plated	Pewter, Which contains NO lead, Silver Plated and finished to look antique.
ATB	Anti Tarnish Brass	A Brass alloy that is Tarnish resistant and had the look of 14kt gold.
C/P	Copper Plated	Usually brass which is copper plated.
Copper	Copper	Solid Copper.
G/F	Gold Filled	Contains 1/20th 14kt Gold, base metal is red brass, also shown as 14/20.
G/F WHT	White Gold Filled	Contains 1/20th 14kt White Gold, base metal is red brass, also shown as 14/20.
G/P	Gold Plated	Contains no or trace amounts of Gold, base metal is usually brass or steel.
GM	Gun Metal	Black plating usually over Brass or Pewter, contains no lead.
IRP	Imitation Rhodium Plated	Base Metal usually Brass or Steel plated to give the appearance of Rhodium (darker than Silver)
N/S	Nickel Silver	Solid Nickel Silver.
NKP	Nickel Plated	Base Metal usually steel plated with nickel to give more of a white finish.
R/B	Red Brass	Red Brass is 85% copper, 15% zinc.
S/F	Silver Filled	Contains 10% Sterling Silver, base metal is nickel.
S/PC	Silver Plated Copper	Gold Copper which is Silver Plated.
S/P	Silver Plated	Contains no or trace amounts of Sterling Silver, base metal is usually brass or steel.
SPP	Silver Plated Pewter	Pewter which is Silver Plated, contains no lead.
S/S	Sterling Silver	Solid 92.5% Fine Silver.
S/T	Silver Tone	Contains no Sterling Silver, Color may vary.
White	White Metal	A base metal usually a type of pot metal.

## Beadalon Crimp Cover Instructions

Place the Crimp Cover over the exposed, already crimped Crimp Bead/Tube .

Close the Crimp Cover in the Mighty Crimper's outer jaw, or EZ-Crimp pliers.

Once securely closed, Crimp Covers provide an ultra-smooth, clean finish.

## Beadalon Crimping Instructions p. 156

Feed one Crimp Bead onto the Beadalon wire, then loop it through a Clasp and back through the Crimp. Be sure wires are side by side, not crossed.

Place the crimp in the OUTER jaw of the Crimp Tool, make one firm compression. This will shape the Crimp into an oval, keep the wires parallel.

Place the Crimp Bead into the crescent-shaped groove (innerjaw) of the Crimp Tool. Make one firm compression.

Place the Crimp into the tool's semi-circle groove (outer jaw), turn it 90° and make another compression until the Crimp Bead is nicely rounded.

String the first bead, then cut the excess wire with the Beadalon Flush Cutter.

String the remaining beads and repeat steps 1, 2, and 3 on the opposite end to attach the other side of the clasp to complete the design.

# Toggles: The Perfect Clasp

figure 1

A toggle consists of two parts: a ring and a bar, as shown in **figure 1**. The toggle bar must be equipped with a lead (a short chain or strand of seed beads that is just over half the length of the toggle bar) in order to insert and remove the toggle bar from the ring. Furthermore, the width of the bar and lead together must be a bit narrower than the opening of the toggle ring **figure 2**.

figure 2

The lead is the part of a bracelet that takes the greatest stress. If it's made of chain, the links must be soldered. And if you have to attach your own chain lead, do so with small split rings used in parallel as though they were one. Never attach the lead with a jumpring.

## Hooks & Eyes

Our stylish hook and eye clasps will give splendid accents to your design. Some are straight-forward in showing the hook while others cleverly disguise the hook behind another shape.

Best used on heavier necklaces so that gravity will keep from releasing unintentionally.

Suitable for use on any string material.

# Beautiful Bali

Nothing captures unique character like Bali beads. Each bead is individually handcrafted out of Sterling Silver and of the highest quality. Bali beads are sold by the gram and are combinable for better price breaks. Variations in size and style will occur. If you are overwhelmed with the selection, choose the Bali Grab Bag on p. 181 and save money while you're at it. No two bags are alike. Each bag gives you at least 100 grams of beads and is guaranteed to have two clasps included. Genuine Bali Beads. Made in Bali, Indonesia. Size will vary. Weight listed is only an estimate, you will be billed for actual weight.

## Bead Tips: Hide the Knot (p.134)

figure 1

figure 2

figure 3

A bead tip looks like two half beads with a hooked handle. Use it to hide the knots at the ends of a necklace strand. Use doubled cord for the bead strand and either tie a fat multiple overhand knot near the end of the tail or tie an overhand knot and string a size 11" seed bead. String through the bead tip from the inside to the outside. Then string the beads

To end, string into a bead tip from the outside. String a size 11" seed bead, then cut off the needle. Tighten the beads on the strand, making sure there are no gaps, but leave enough slack for the strand to drape softly. Then tie the cord ends together with a surgeon's knot **figure 2**.

Glue both knots and trim the thread to about 1/8" (3mm) when the glue is dry. Press the halves of a bead-style bead tip together with chain nose pliers to enclose the knot and seed bead. Use round nose pliers to roll the hook tightly closed around the loop on the clasp. **figure 3**.

## SCRIMP™ INSTRUCTIONS

**Step 1:** Loosen screw to allow wire to go through the Scrimp™.

**Step 2:** Feed the wire through the Scrimp™, then onto a Wire Guardian, attach a Clasp, and finally back through the Scrimp™.

**Step 3:** Tighten screw for a secure and clean finish. TIP: For an extra strong Scrimp™, add a small amount of adhesive to the screw to secure it in place.

## Blossoms

Traditionally used to make squash blossom necklaces, these can be made into dangle earrings by simply adding ear wires or ball ear post findings. They can also be used to make single strand bead necklaces. Tumble polished. Machine punched and formed.

### White Gold-filled Ring Guards

Our ring guards are a temporary solution to oversized rings until you can get them to a jeweler. Use with narrow ring bands only. Chain nose pliers are recommended to attach guard. Adjusts ring size down approximately half a size.

## Beading with Foxtail p. 202

Foxtail can be soldered to finish. You can also crimp it using crimp ends. Or you can simply add jump rings to the ends. In order to add jump rings, read the following:

figure 1

You want to make an opening in the foxtail to insert the jump ring. Using a chain nose pliers (p.50), remove the already cut loops at the end of the foxtail. **figure 1**

figure 2

Look carefully for the 2nd set of links in the chain and push a scribe through at that point to create a loop large enough to fit your jump ring (p.109). Make sure you go straight through the foxtail to get maximum metal thickness in your loop. **figure 2**

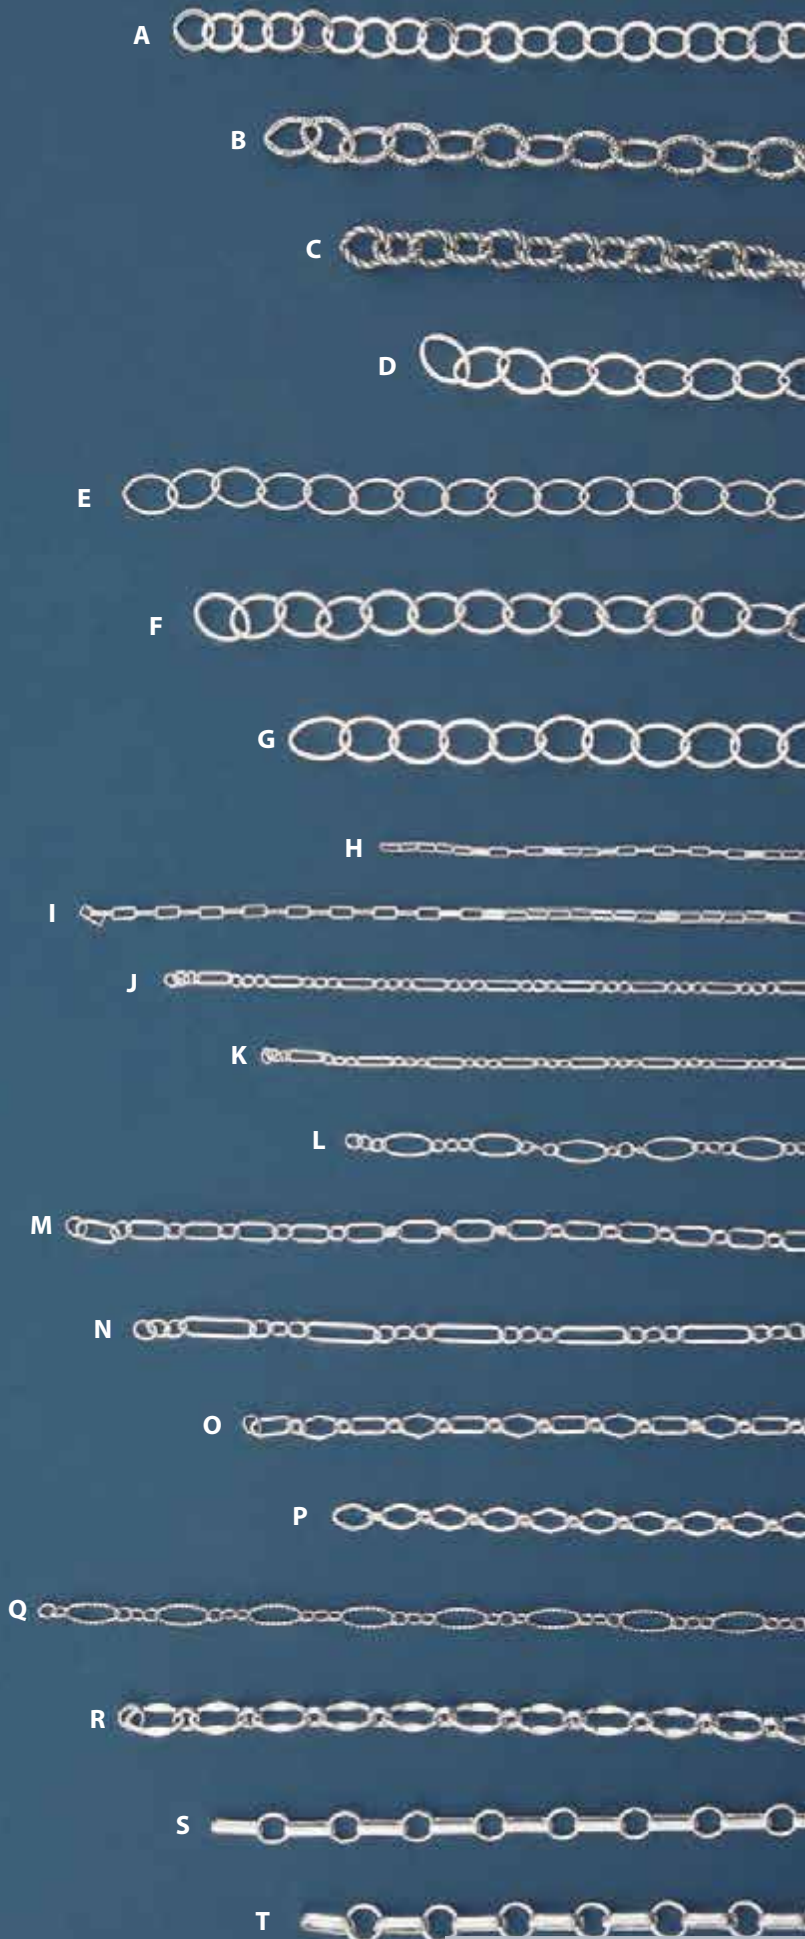

figure 3

Slide your jump ring through the foxtail loop and close it. One end is done! **figure 3**

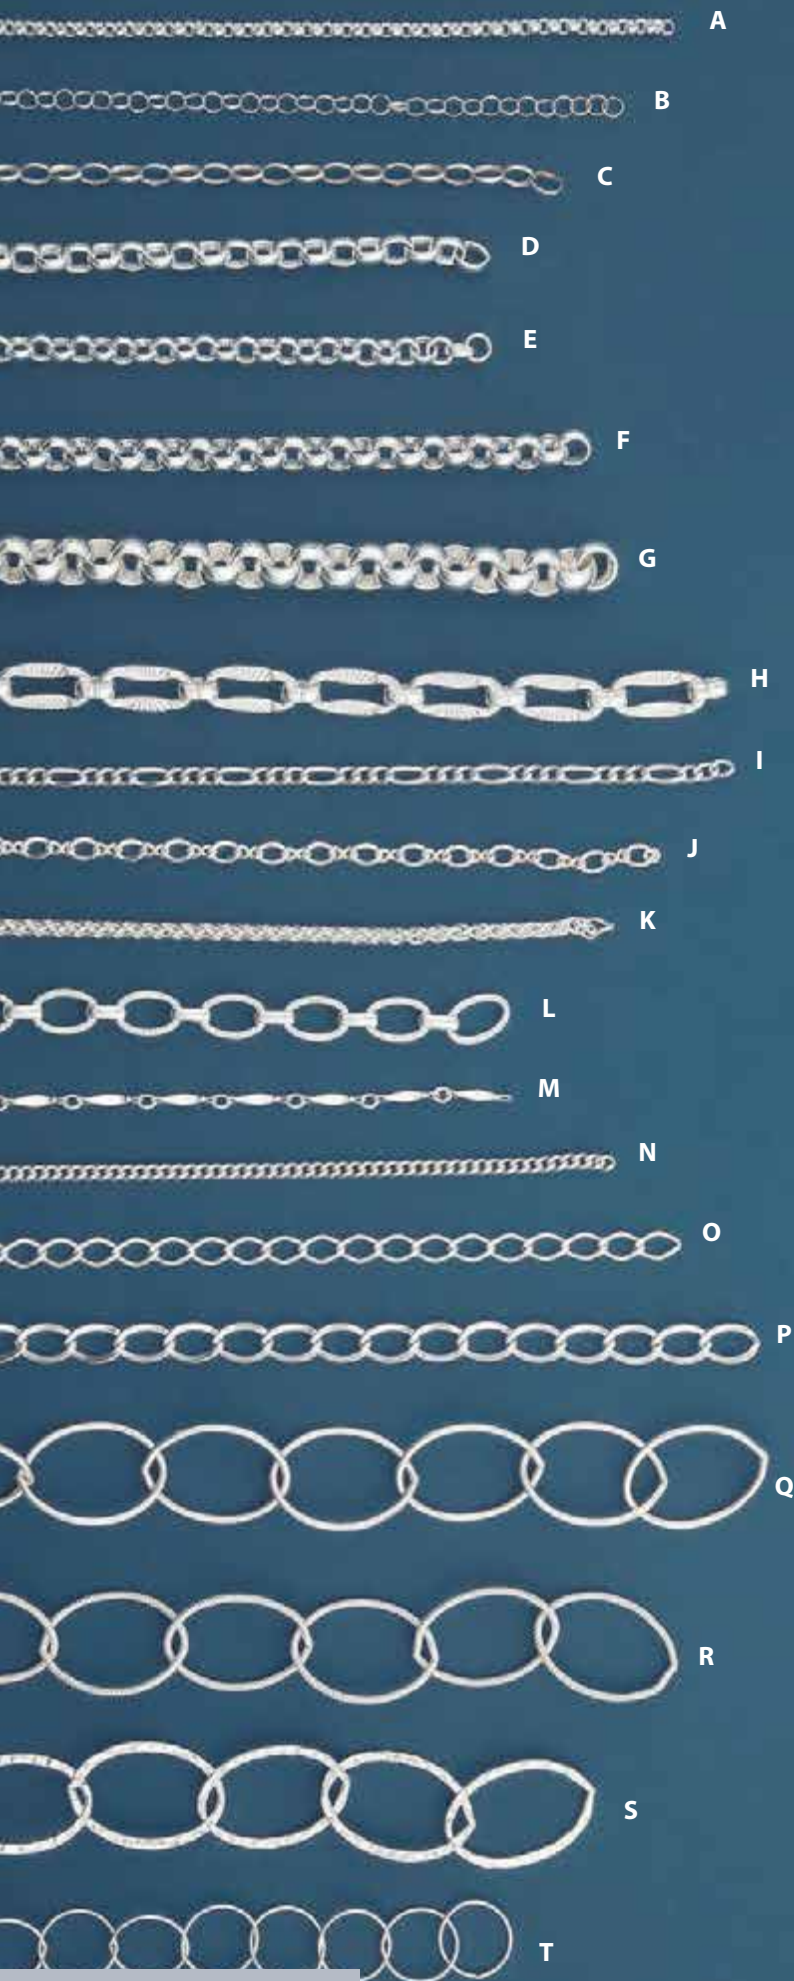

figure 4

String your beads to satisfaction. If you want, you can stiffen the stringing end of foxtail to make it easier for threading. With a flat nose pliers (p.50) squeeze down with moderate pressure on the first inch of the end you'll be threading (the opposite end of the foxtail from the jump ring). If you look closely, you will notice that foxtail chainlinks form a square. Rotate the foxtail a half turn and squeeze the other sides of the square with the pliers again. This will stiffen that section of foxtail to make it easy to push it through the bead holes. When you are done beading, cut off the stiff section of foxtail and repeat the jump ring steps above for the 2nd end of your strand. Adding cones (p. 108) to your ends is a nice way of hiding the foxtail on your strand. **figure 4**

# Beads and Strands

## Create Designs That Last!

### It begins with the wire you choose

Stringing beads and pearls takes time and can be expensive. After all your hard work, you want your designs to last for many years of wear and enjoyment. We do too, so we provide you with the following guidelines to help you extend the longevity of your bracelets, necklaces, watchbands, and other designs. Be careful to select the proper diameter, strength, and flexibility of wire you need for your design based on the type of beads you are stringing, the weight of the beads, and the amount of spacing between them. Abrasion is the number one enemy of wire. By following these simple rules, you will reduce the effects of abrasion and prolong the life of your designs.

#### 1. Use the largest diameter wire you can

Larger diameter wires are more abrasion resistant than smaller ones and stand up to more wear. Use the largest diameter wire that will comfortably pass through the smallest bead hole in your design. If you can pass the wire through the smallest bead hole more than once, you definitely should use a larger diameter wire. This rule is especially true for designs that are subject to increased wear and abuse such as bracelets and watchbands. Be careful to use the largest diameter wire also when stringing glass, metal, semi-precious stone, and other abrasive beads.

#### 2. Choose a wire with a breaking strength consistent with the weight and type of beads being used

The heavier the beads, the greater the breaking strength of wire needed. If you are stringing heavy glass, metal, and semi-precious stone beads, be sure to use a wire with a strong enough break strength to support the total weight of the design, plus additional strength to handle occasional snags or pulls. The diameter of the wire is not always a good indicator of strength.

#### 3. Select a grade of wire best suited for your designs

The greater the number of strands, the more flexible the wire. In other words, 7 strand wire is flexible, 19 strand wire is more flexible, and 49 strand wire is the most flexible. After you have considered rules 1-3 choose the grade of wire that will allow your design to look and feel the way you want.

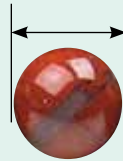

#### 4. When stringing your designs, allow enough space in between beads so the design can move freely

You can significantly increase the longevity of your designs simply by increasing your spacing. When beads are able to move side-to-side slightly, the contact with the wire is spread over a greater area reducing the effects of abrasion.

#### 5. Use a bead reamer to gently smooth and round out the holes of each bead

Be sure to use the reamer on both sides of the bead until they are smooth and free of sharp edges and burrs. The beads should "slide" on the wire. Beads that slide along the wire cause less abrasion.

## Bead Sizing

A micrometer or dial caliper is used to measure bead size. Some beads are measured in millimeters and some with size numbers. To size a bead, measure across the widest point on the outside of the bead.

Beads are sold by weight, the strand, or the piece. Most strands are 16" long, though this can vary.

## Information on Seed Beads

Bead Size	Beads/ inch	Beads/ gram	Approx. Weight (in grams) of 12-strand hank
15	25	250-350	Not sold by hank 25gr
13	27	150-200	33.0
11	20	100-150	34.5
10	16	75-125	38.5
8	13	30-40	Not sold by hank 25gr
6	10	15-20	Not sold by hank 25gr

## Seed Bead Tips

Grade seed beads by sorting them by width. Use the slightly narrower beads for off-loom weaving increases (effectively adding a partial bead), the wider beads for weaving increases (increasing by more than a full bead). Though separ-

ating your beads takes a bit more time, you'll find that your pieces will lie flatter if you do.

## A Word About our Stone Beads pp.219-261

We work hard to offer you the finest strands in both quality and selection. Our stone is cut from Grade A rough, the highest quality stone coming out of the ground. Only about 10% of what emerges from any particular mine is considered Grade A, and we've got it for you. Each of our beads is individually hand cut, bead by bead, and then strung, giving you a singular and unique product, made with attention to detail. Very few of our stone beads are tumble polished. Almost all are hand polished, which gives the final product a much smoother and shinier finish. At Thunderbird, we are proud of what we offer so that you can be proud of what you make!

# Japanese Seed Beads

These rocailles beads are narrower in shape but still have the large center hole. They are extremely uniform, making your next seed bead project easier. For consistency in Size and Color for a project, it would be best to order all at once. Sold in 25 gram vials. There is no better bead for you, and the color selection is fantastic.

## Lucite Miracle Beads

Miracle Beads have a lucite core with a silver mirror plated finish and coated with several layers of colored lacquer. When viewed in the light, they appear to have a bead within the bead. The light passes through the lacquer, which reflects the mirror core back through the layers hence the miraculous effect. Sold in 10 pc pkgs.

## Native Stone Fetishes

Animals cut from various stone and shell. Each animal represents a different attribute such as protection or good luck. Add this to the natural beauty of the material and the craftsmanship of the carving, and fetishes become an element of intrigue whether as an accent or as the main focus of the necklace or bracelet. Carved in China.

## Barrel Beads

Innovative and alluring, the rounded ends of the barrel bead give it a softer, more natural look. Strands are tapered from smaller stones on the ends, to larger stones in the middle, with rondelles interspersed among the barrels. Combine these beads with other shapes of stone, silver, and Bali beads, or simply string them "as is." Their versatility is as unlimited as their appeal. 18" Strands.

Trillions of Trillion Beads!

Beautifully shaped and polished to a high luster, the trillion bead has an elongated triangular cut with slightly rounded edges. Strands come tapered from smaller stones on the outside to larger stones in the middle. Mix and match our wide variety of stone strands, include spacers, or simply use alone. There are literally trillions of possibilities. Let the natural elegance of trillion spark your creativity. 18" strands.

# Freshwater Pearls

These natural freshwater pearls are drilled and may vary somewhat in size. The natural play of color in pearls and mother of pearl is due to the formation of layered platelets of aragonite, and nearer to the surface, skins of conchiolin. These layers refract light and give the material its pearly, or "orient" luster. All strands 16" long. Bead count will vary with each strand. Mohs Hardness: 3-4.

Stock#	Description	Size mm	1-4str	5+str

## Turquoise Confusion Clearing up the Terms

Many people are surprised to learn that only about 25% of turquoise is usable or desirable in its natural, untreated form. Most untreated turquoise is a fragile, porous stone with a tendency to undergo changes in color when exposed to light, perspiration, oils, and detergents. While turquoise is hard enough to be considered a gemstone, it is comparatively soft. The following are various treatments done to turquoise to keep it from fading or crumbling.

### Natural

Material which has not been altered in any way from how it is found in nature.

### Enhanced

A hard turquoise which is treated with varying electrical currents that harden the stone, and enhance the color of the turquoise. No dyes, resins, waxes, or oils are used. Enhanced turquoise will not change color over time.

### Stabilized

Impregnated with acrylic or epoxy to harden the stone and enhance the color. Stabilized turquoise will not change color over time.

### Compressed

A treatment that uses pressure to harden the stone.

*At Thunderbird we strive to give our customers accurate information on all of our products. If you have a question that is not answered here, please do not hesitate to call or email us.*

### Fracture-Sealed

The stone is treated with a fracture sealer which hardens the matrix in it.

### Synthetic

Stones produced in the laboratory, which exactly reproduces the chemical composition and physical characteristics of the natural stone.

### Lab-Grown

Artificially made substances which have all the same physical properties and chemical composition of the naturally found substance.

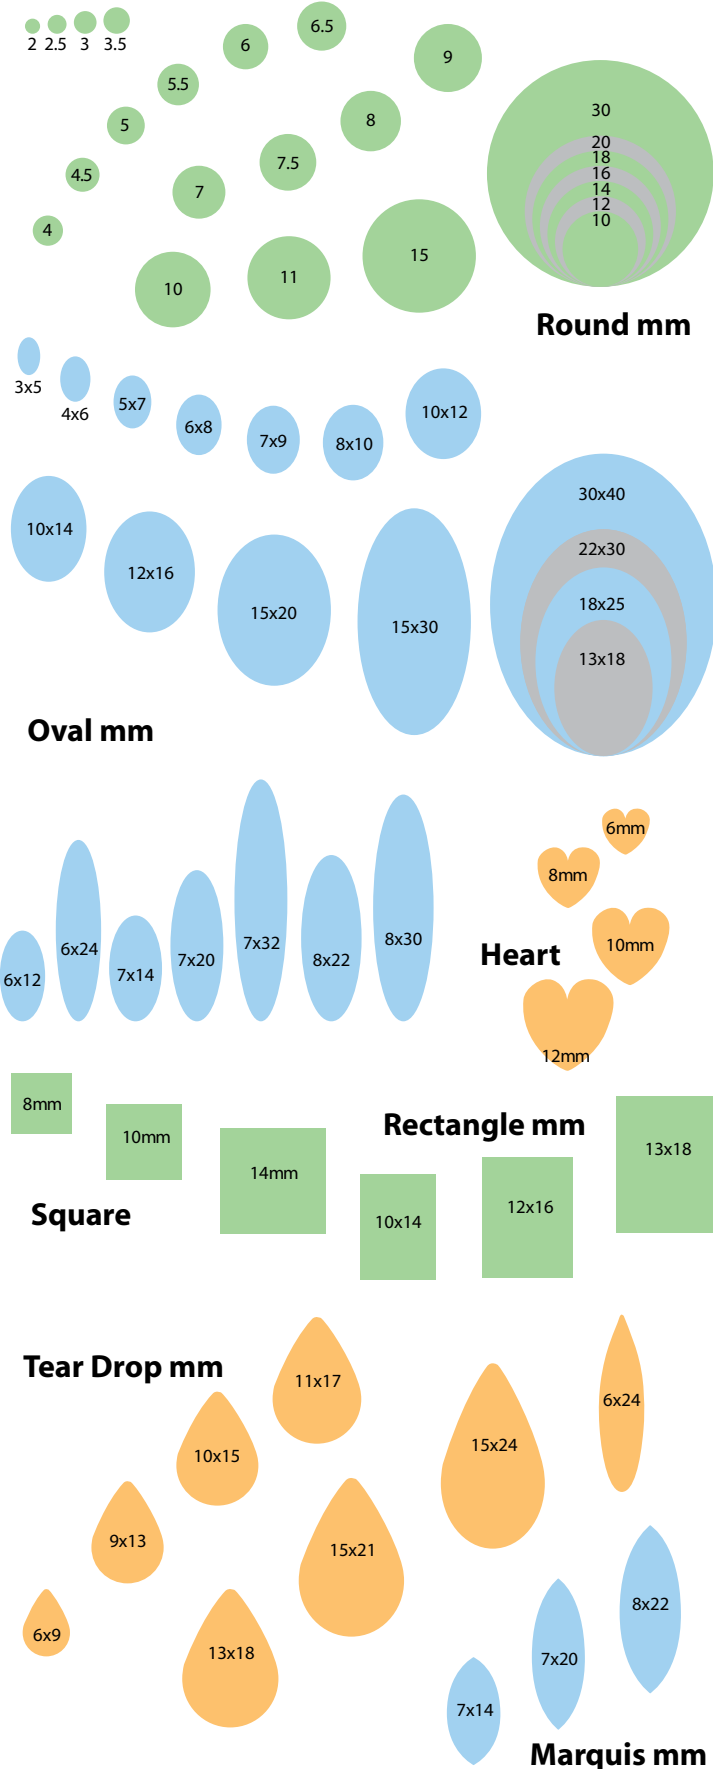

### Imitation

Any compound or mineral which is manufactured to resemble the natural product.

### Reconstituted Turquoise

Process of taking pieces of turquoise; chips, powder or low grade, mix with an epoxy resin, add dye, then compress into blocks. Blocks can then be cut into different forms; beads, cabochons, carvings, flat slabs for inlaying. Percentage of actual turquoise to resin material varies greatly from each manufacturer. Reconstituted turquoise has a distinctive odor due to the resin content.

# Amethyst

Amethyst is the name given to crystalline quartz in shades of purple, lilac, or mauve. It is the most highly valued stone in the quartz group. From the Greek word for "not drunken," amethyst was traditionally worn to guard against drunkenness and to instill a sober and serious mind. Amethysts are found in geodes in alluvial deposits. Some of the largest amethyst-containing geodes come from Brazil, but other sources include Russia, Sri Lanka, India, Uruguay, and the USA. Mohs Hardness: 7

# Faceted, Lab-Grown Amethyst

This lab-created or synthetic stone has essentially the same optical, physical, and chemical properties of natural amethyst. Faceting allows light to play throughout the stone, giving it a pleasing glimmer and showing off the nuances of purple color. Popular for jewelry in the Victorian era and once a favorite gemstone of high officials in the Christian church, amethyst is today best known as the birthstone for February. Mohs Hardness: 7

# Amber Reconstituted

The use of amber as an ornamental material dates from Neolithic times. The Romans called it succinum, as it was believed to come from tree sap, and rightly so. Amber is the fossilized, hardened resin of trees, formed tens of millions of years ago. Found mostly in the Baltic, younger ambers are also found in the Dominican Republic. This golden yellow to golden orange, lightweight stone ranges from translucent to semiopaque in appearance, and may contain blisters and occasional inclusions of insects and plant parts. Its unique appearance has gained popularity in recent years. This amber is reconstituted. Mohs Hardness: 2-2.5

# Azurite/Malachite

Also called azure-malachite, this stone is actually azurite and malachite which have been stabilized and compressed together. The deep blue of azurite and stunning green of malachite often occur together in or near copper deposits. As a result, azure-malachite is found in copper-mining areas such as Zaire, Australia, Chile, Mexico, and Namibia. Mohs Hardness: 3.5-4

# Carnelian

Once thought to still the blood and calm the temper, carnelian is a flesh-red to brown-red, translucent to opaque type of chalcedony. Its red color comes from iron within the stone; heating can enhance the color. Most carnelian on the market is stained and heat-treated chalcedony from Brazil or Uruguay. Mohs Hardness: 6.5-7

# Coral

Coral is one of a few gemstones of organic origin. Coral is the skeletal remains of marine animals called coral polyps. Colonies of these tiny creatures build branching structures as they grow, gradually forming reefs and atolls. Most precious coral is found in warm waters. This deep red coral is found in the Mediterranean Sea. The oldest known findings of red coral date from the Mesopotamian civilization, i.e. from about 3000BC. Believed to bring protection, coral was given as a gift by parents to their young children. Mohs Hardness: 3-4

# Cubic Zirconia

Cubic Zirconia, or CZ, is a transparent and colorless, highly lustrous artificial product with a cubic crystal system. Because of the strong dispersion and high refractive index, the zirconia is the most popular and brilliant diamond substitute. Although this synthetic is not as hard as diamond, zirconia's density is about one and a half times twice that of diamond, and its dispersion is higher. Mohs Hardness: 8.5

# Imitation Denim Lapis

For those seeking a more uniform and economical version of this paler color of lapis lazuli, we offer this attractive imitation product. Denim lapis lazuli is so named because its color both resembles and complements denim clothing. Once the cast-off material from cutting intense blue lapis lazuli, denim lapis is now prized in its own right.

# Fiber Optic

These interesting man-made stones contain the same optical fibers that are found in telephone lines. The fine parallel fibers create the "cat's eye" effect, known as chatoyancy, which is found in the naturally occurring tiger's eye stones. (See Page 324-325) Mohs Hardness: 6-7

**Imitation Gaspeite**

Rarer in the natural form than many other stones, this imitation gaspeite is a uniform, more economical alternative to natural gaspeite. Gaspeite is easily recognizable by its distinctive yellowish-green color, contributing to its popularity with those seeking a different look.

**Hematine**

Prized for its dark, shiny, metallic luster, hematine is the trade name for an imitation of hematite made from pressed and heat-fused iron oxide. Hematine offers a more affordable product, while providing a less fragile composition. Unlike hematite, hematine is slightly magnetic. Mohs Hardness: 5.5-6.5

**Lapis**

Lapis lazuli is an intense blue stone composed of several different minerals, including: lazurite, mica, pyrite, hornblende, and calcite. It is one of the most valuable semi-opaque ornamental stone materials, comparable to good quality turquoise and the better jades.

The best quality lapis is from Afghanistan, where it has been mined for 6,000 years.

Incorporated in many famous pieces of art since antiquity, including the mask of Tutankhamen, lapis was worn by some people in the belief that it would protect them from evil. During the Middle Ages, lapis was used as a pigment to produce aquamarine. Today, lapis is a popular stone for beads and rings. Mohs Hardness: 5-6

# Malachite

Malachite is famous for its radial banding and deep green color. Found near copper ore deposits, from which it is formed, this versatile and popular stone is mined in Zaire, Australia, South Africa and Arizona. The most important deposits were once in Russia, yielding blocks over 20 tons in weight for the tsars to use in decorating their palaces. Popular today for use in Southwestern style jewelry, malachite was also popular in the past with the ancient Egyptians, Greeks, and Romans. It was worn as an amulet to ward off danger and illness. Mohs Hardness: 3.5-4

**Black Onyx**

Onyx is a variety of the microcrystalline quartz, chalcedony. The term onyx is used to refer to both a layer stone with the combination of a black base and a white upper layer, and also to unicolored chalcedony such as black onyx. In its original form chalcedony is blue whitish-gray. Since ancient Egyptian times, onyx has been dyed to improve or change its color. Chalcedony is dyed in many colors, black being the most popular. Black onyx is used in many types of jewelry and is known for its durability.

Found worldwide, large amounts of chalcedony come from Uruguay and the bordering regions of Brazil. Mohs Hardness: 6.5-7

**Paua Shell**

Paua shell has a pearlescent luster so brilliant that it is sometimes called sea opal and is used for imitation opal doublets. For centuries the indigenous Maori people have used the Mother of Pearl of the Paua mussel from New Zealand, which has a blue-green iridescent color play, for inlays in mystical carvings. Our paua shell is dyed and has a protective resin cap. Mohs Hardness: 3.5

**Tiger's Eye**

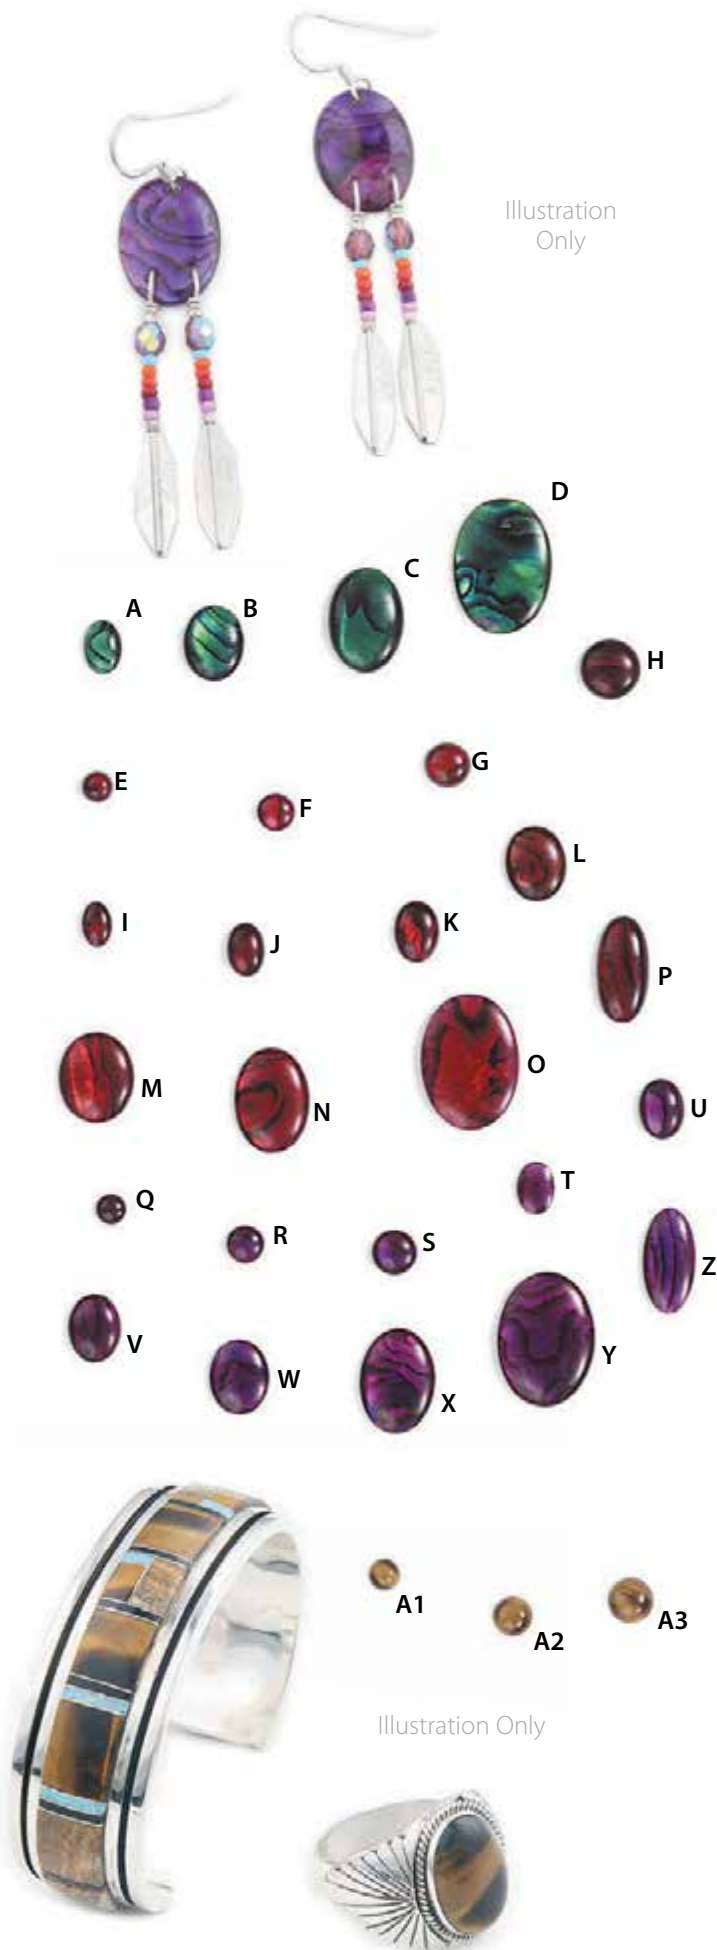

When quartz which contains similarly oriented fibrous inclusions of crocidolite (blue asbestos) is appropriately cut, a cat's eye effect known as chatoyancy is created. When the ground color in a quartz stone with chatoyancy is greenish-gray or green, the gem is known as cat's eye quartz. If the ground color is blue-gray or bluish, the variety is called hawk's eye. A golden yellow reflection on a brown ground color is known as tiger's eye. Iron oxide staining gives tiger's eye its yellow and golden brown stripes. The most important source of tiger's eye is South Africa, but it is also found in Australia, Myanmar, India and California. Mohs Hardness: 6.5-7

## Sleeping Beauty Turquoise

Sleeping Beauty turquoise is mined in Globe, Arizona. Usually a beautiful robin's egg blue and very clear with little or no matrix, this variety of turquoise is popular with Navajo craft-people. Turquoise got its name from the Levantine traders called Turks who brought the stone to Europe from Persia via Turkey centuries ago.

Untreated turquoise is a porous stone with a tendency to undergo undesirable changes in color when exposed to light, perspiration, oils, and detergents. This turquoise has been enhanced by treating it with electrical currents that harden the stone, intensify the color, and prevent it from changing color over time. No dyes or resins are used. Mohs Hardness: 5-6

# Classic Kingman Turquoise

Kingman turquoise is mined in Kingman, Arizona, and comes in a range of colors and matrix patterns. The matrix is normally brownish. Turquoise got its name from the Levantine traders called Turks who brought the stone to Europe from Persia via Turkey centuries ago. Native Americans have prized turquoise since the time of the Aztecs, who mined it in Mexico.

Untreated turquoise is a fragile, porous stone with a tendency to undergo undesirable changes in color when exposed to light, perspiration, oils, and detergents. Kingman turquoise in particular is very chalky and unworkable in its natural form. This turquoise has been stabilized by impregnating it with a resin or epoxy, which saturates the pores and gives the stone a richer color. It also hardens the turquoise so that it is workable for jewelry. Mohs Hardness: 5-6

## Turquoise Confusion Clearing up the Terms

Many people are surprised to learn that only about 25% of turquoise is usable or desirable in its natural, untreated form. Most untreated turquoise is a fragile, porous stone with a tendency to undergo changes in color when exposed to light, perspiration, oils, and detergents. While turquoise is hard enough to be considered a gemstone, it is comparatively soft. The following are various treatments done to turquoise to keep it from fading or crumbling.

### Natural

Material which has not been altered in any way from how it is found in nature.

### Enhanced

A hard turquoise which is treated with varying electrical currents that harden the stone, and enhance the color of the turquoise. No dyes, resins, waxes, or oils are used. Enhanced turquoise will not change color over time.

### Stabilized

Impregnated with acrylic or epoxy to harden the stone and enhance the color. Stabilized turquoise will not change color over time.

*At Thunderbird we strive to give our customers accurate information on all of our products. If you have a question that is not answered here, please do not hesitate to call or email us.*

**Compressed**

A treatment that uses pressure to harden the stone.

**Fracture-Sealed**

The stone is treated with a fracture sealer which hardens the matrix in it.

**Synthetic**

Stones produced in the laboratory, which exactly reproduces the chemical composition and physical characteristics of the natural stone.

**Lab-Grown**

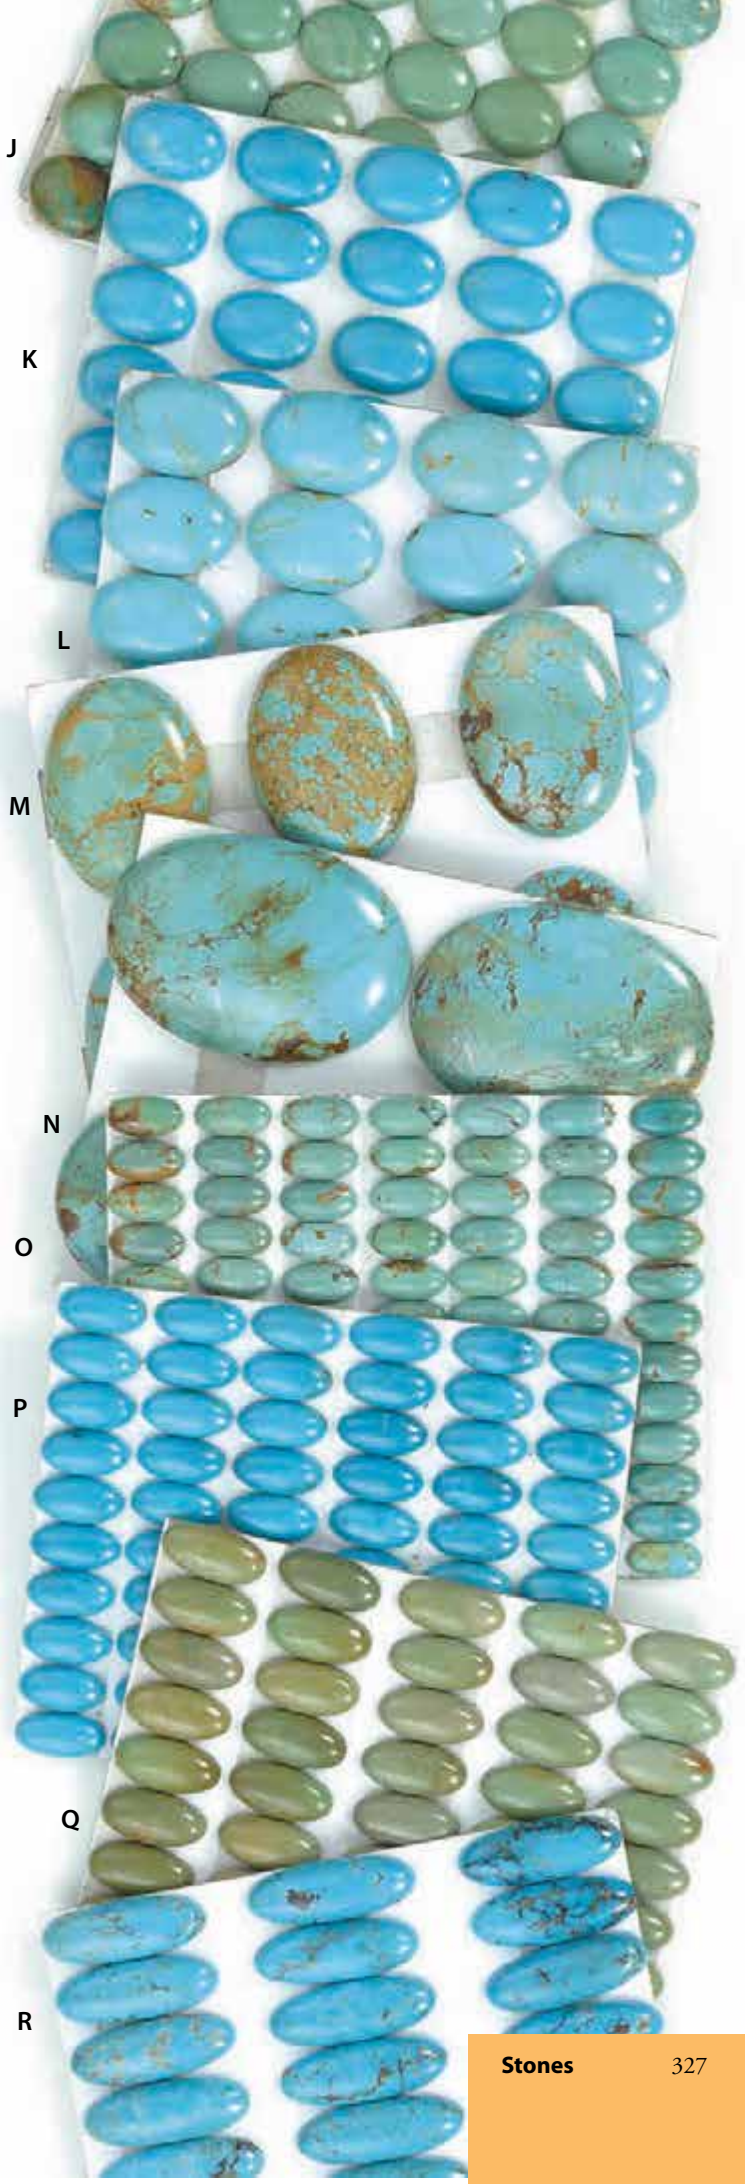

Artificially made substances which have all the same physical properties and chemical composition of the naturally found substance.

**Imitation**

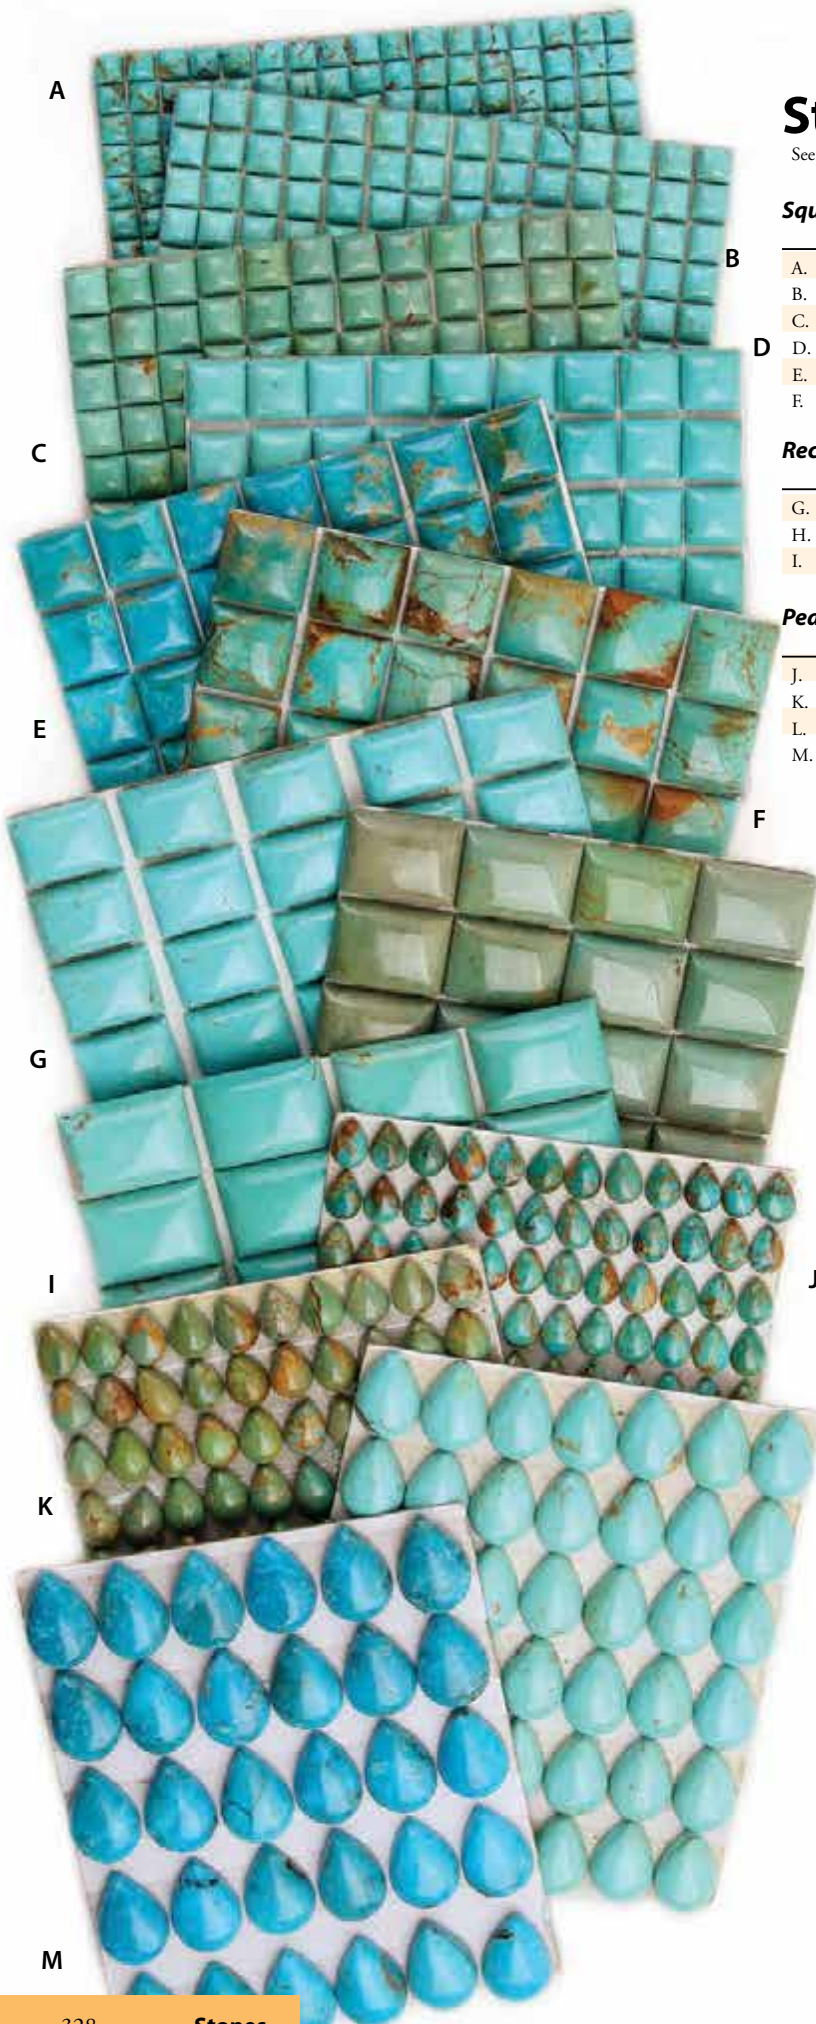

Any compound or mineral which is manufactured to resemble the natural product.

**Reconstituted Turquoise**

Process of taking pieces of turquoise; chips, powder or low grade, mix with an epoxy resin, add dye, then compress into blocks. Blocks can then be cut into different forms; beads, cabochons, carvings, flat slabs for inlaying. Percentage of actual turquoise to resin material varies greatly from each manufacturer. Reconstituted turquoise has a distinctive odor due to the resin content.

## Freeform Cabochons

Freeform cabs do not have a regular, geometric shape, but rather follow the natural form of the stone and the lapidary's vision. A medium freeform cab is not as thick as a natural high freeform cab, while the depth is uniform in medium and irregular in natural high. All freeform cabs have an epoxy backing, which varies in depth.

## Rough Coral

Coral is the skeletal remains of marine animals called coral polyps. This natural, rough, red coral is from the Mediterranean Sea.

### Simulated/Imitation Opal

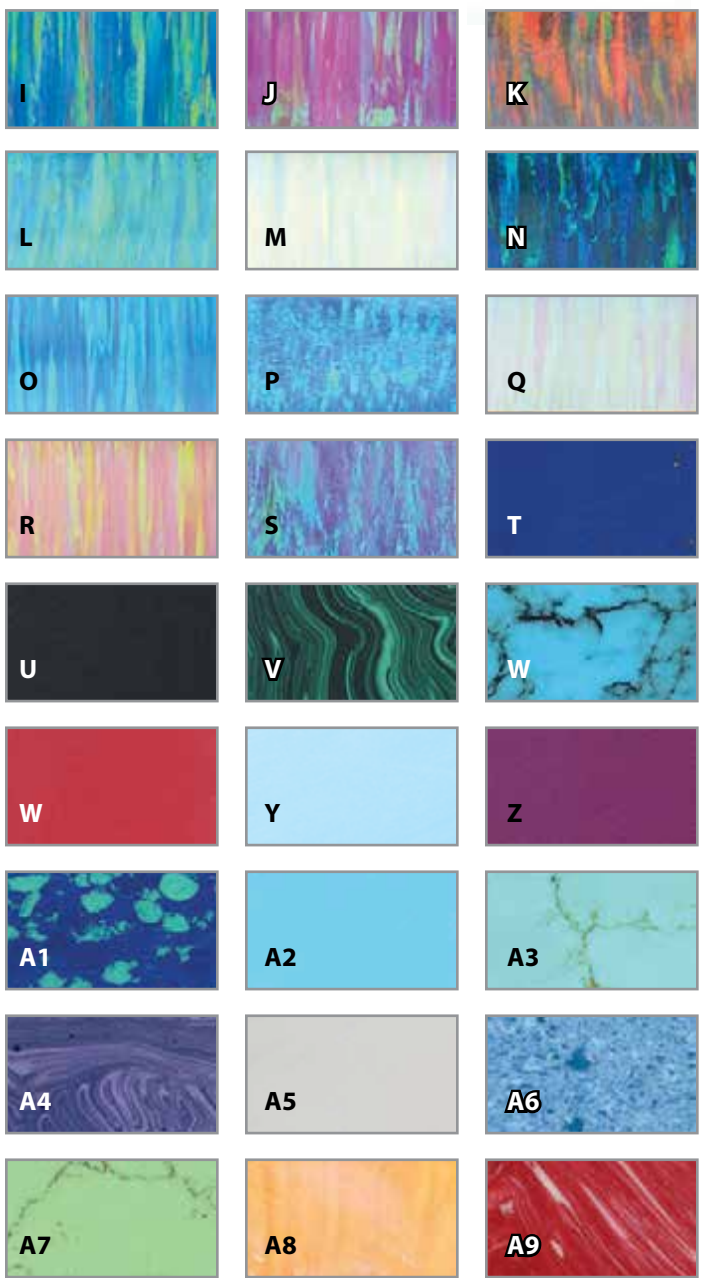

Simulated opal is a composition of 80% silica and 20% resin. Not only is imitation opal much more economical than natural opal, but often the "fire" in imitation opal is more evenly dispersed than in the natural stone. Imitation opal will not crack as the natural stone sometimes does. Mohs Hardness: 4

### Imitation Block

Block is manufactured from epoxy, dye and a crushed stone filler. The name given to the block indicates the color and pattern of the stone that the block imitates; it does not mean that the block contains any of the stone in the name. Consistent in color, pattern, and hardness, block is an easy to work and economic alternative to natural stone for some applications.

## PHONE NUMBERS & HOURS

**CALL 1-800-545-7968** toll-free with your orders. Associates are ready to assist you Monday through Friday from 8:00 am through 5:30 pm, Mountain Time. Toll free service is available from the U.S. and Canada.

**FAX 1-800-557-7968** with your orders. The fax line is available 24 hours a day, 7 days a week from the U.S. or Canada.

**WEBSITE:** Order from our web site: [thunderbirdsupply.com](http://thunderbirdsupply.com)

**E-MAIL:** [mailorder@thunderbirdsupply.com](mailto:mailorder@thunderbirdsupply.com)

### FOR METALS QUOTES and INTERNATIONAL ORDERS ACCOUNT INFORMATION OR OTHER QUESTIONS:

Please call us at (505) 722-4323 from 8:00 am to 5:30 pm daily MST. Our administrative and accounting fax number is (505) 722-6736.

**Albuquerque Phone:** 505.884.7770 Fax: 505.884.6936

## PAYMENT

### CREDIT CARD ORDERS

We are pleased to honor your MasterCard™, Visa™, Discover™, and American Express™ credit card. Please have your account number, expiration date, and CVV2 Code available when you call. Some restrictions may apply.

### CHECKS, MONEY ORDERS, WIRE TRANSFERS

We accept personal or business checks from established customers who have completed our check acceptance process. We also accept cashier's checks, money orders, and wire transfers (please contact the business office to arrange wire transfers). Checks sent to pre-pay orders for a new customer may have their shipment delayed to assure bank clearance. Checks returned unpaid by a customer's bank for any reason will incur a \$30.00 service charge. We will no longer accept checks on accounts where two or more checks have been returned unpaid. Wire transfer fee \$35.00. A valid state issued Driver's License number is required to get approved by Telecheck. **Please submit all orders and payments to the Gallup address.**

### OPEN ACCOUNTS

We can open accounts for established customers who complete our account application process.

### PRICING

Prices are net, F.O.B. Gallup, New Mexico, USA. Prices and specifications are subject to change without notice. Listed prices are based on a \$20.00 silver market and a \$1,200.00 gold market. Actual price will vary according to the market.

### TAXES

Sales within the State of New Mexico and Arizona are subject to state sales tax unless we have your valid New Mexico non-taxable transaction certificate (NTTC) or Arizona Transaction Privilege Tax Exemption Certificate on file. Orders delivered outside of New Mexico or Arizona may not be subject to state sales tax.

## SHIPPING

Thunderbird can ship via most recognized carriers. Shipping and insurance charges are added to each invoice - WE CHARGE ONLY ACTUAL SHIPPING COSTS! A handling fee of \$2.00 will be added to all orders and a handling fee of \$6.00 will be added to all international orders. Some products require an additional Hazardous Materials shipping fee or special crating fee. Some items may not be shipped by UPS or the U.S. Postal Service due to size or weight. At our option, we may not offer shipping on specific items. Federal Express and UPS will only deliver to street addresses, not post office boxes. Next Day, 2nd Day, and 3rd Day orders placed by phone have a cut-off order time of 12 noon MT. Thunderbird is not liable and accepts no responsibility for delays caused by holidays, weather, other acts of god, or world events that cause delays in shipping transit time.

### MERCHANDISE RETURNS

For your protection, ship all returns prepaid and insured. We will refund your postage if we shipped in error. Please package returns securely - we cannot be responsible for items returned in envelopes.

### RESTOCKING FEES

Returned unclaimed packages are subject to a 15% restocking fee. All shipping charges incurred are still payable. Items returned for reasons other than Thunderbird error more than 10 days after receipt are also subject to the restocking fee.

### ERRORS, DAMAGES, SHORTAGES

Thunderbird must be notified of items shipped in error, damaged merchandise or shortages within 10 days of receipt of shipment to establish a claim.

### SAFETY

Thunderbird Supply bears and accepts no responsibility for injury or damage which may result from the improper use of its products, or from a modified product or repair by others, or from abuse, abnormal use or use beyond normal product life.

### MATERIAL SAFETY DATA SHEETS (M.S.D.S.)

M.S.D.S. are available for all of our products. Please inquire if you need an M.S.D.S. for a specific product. They are available at no charge.

**Catalog Requests outside the US will be charged \$13.00 USD**

**We carry over 13,000 products;  
if you don't see what you need in this  
catalog, please ask us or see our website!**
